Automatic blood pressure monitor with cuff position indicator

Cuff positioning control

4 Users

Coloured scale: classification of measurements

Medel **CONTROL** is the upper arm blood pressure monitor used to carry out measurements and monitoring of the arterial blood pressure values. This allows to quickly and easily measure your blood pressure, save the measured values and display the development and the average of measured values. You are also warned of possible existing cardiac arrhythmia. The cuff position control symbol is displayed on the LCD for the right cuff positioning and an accurate measurement. Class IIa Medical Device.

• Systolic, Diastolic and Pulse measurements • 4 Users with 30 memories • Irregular heart beat indicator • Low battery indicator • Coloured scale with measurements classification • Values average • Date and time • Batteries and storage bag included • 5-Year Warranty

When "OK" symbol appears on the display the cuff is correctly positioned
